**Online Booking!**

Please visit SkeletonMuseum.com/booking to reserve your field trips and education programs!

Our Education Programs:

- Align with Next Generation Sunshine State Standards
- Integrate a fun, hands-on learning approach
- Encourage students to use problem solving skills through teamwork and communication

**SKELETONS ON DISPLAY**

Pre-K and Kindergarten
Tale of the Tooth
In Tale of the Tooth, students listen to a story about different types of animals and their teeth. Then, participants will engage in a hands-on activity to decide whether certain specimen teeth belong to carnivores, herbivores or omnivores.

Locomotion: Move Like an Animal
Locomotion: Move Like an Animal introduces students to various types of animal movement. Participants will observe skeletal features that define a particular type of movement and then mimic the different types of animal locomotion.

1st and 2nd Grade
To Tell the Tooth
To Tell the Tooth enables students to discover tooth adaptations that allow mammals to survive in a variety of ecosystems. Through hands-on investigation of specimens, students will study the teeth of herbivores, carnivores and omnivores.

Locomotion: How Animals Move
Locomotion: How Animals Move familiarizes students with bones associated with motion as it relates to diet and predator-prey relationships. Participants will observe skeletal features that define a particular type of movement, and then name and imitate that movement.

3rd–5th Grade
Tooth and Eye “Dentification”
Tooth and Eye “Dentification” enables students to discover dentition and vision adaptations that allow mammals to survive in a variety of ecosystems. A hands-on investigation of specimens will allow students to study the teeth and eyes of herbivores, carnivores and omnivores.

Locomotion and Skeletal Adaptations
Locomotion and Skeletal Adaptations familiarizes students with modes of animal locomotion through hands-on observation of various skeletal specimens. Participants then work in teams to identify types of movements and communicate their observations to the class.

Amazing Animal Adaptations
All animals have Amazing Adaptations; some help animals eat, while others help them from being eaten. In this class, we look at various osteological external adaptations that help animals survive.

6th–8th Grade
Mastering Mammal Classification
Mastering Mammal Classification introduces students to the world of classification and its importance in the animal kingdom and life sciences. Students are placed in groups to categorize animal specimens into the appropriate class and communication their observations.

Keys to Identification
Keys to Identification familiarizes students with using dichotomous keys to identify mystery skulls. Students will work in teams to locate, measure, and document various skull features. Emphasis will be placed on the student’s ability to verbally communicate the identification process.

9th–12th Grade
Pathology
Pathology introduces students to the world of forensic science and bone remodeling. After a basic introduction, students will break up into teams to evaluate pathological specimens and investigate possible cause(s) of the abnormality. After the analysis is completed, teams will present their findings to the class.

Forensic Osteology: Human Skulls
Forensic Osteology: Human Skulls is a crime lab-based program focusing on the forensic investigation of various types of trauma to the human skull. After a basic introduction to skull osteology and lab procedures, students will break up into teams using a variety of tools from their forensic science kit to analyze and document key evidence to support their results. They will then defend their findings to the class. Museum quality replicas of human skulls—from actual crime scenes—are used in this program.

University & Adult Educational Groups
SKELETONS offers adult programming for individuals who love lifelong learning!

For an extended experience at SKELETONS, we also offer guided tours for your group!

Outreach Programs
Can’t come to us? We can bring our education programs to you!

For the most up-to-date list of outreach programs, visit:
